SUMMARY

Full-Stack Software Engineer with 4+ years of experience building and scaling web applications, combining Java-based backend systems with modern frontend frameworks to deliver features end-to-end. Designed microservices, event-driven architectures, and REST APIs using Spring Boot, while developing user-facing applications with Angular and TypeScript. Built AI-powered internal tooling that measurably shortened developer ramp-up time in FinTech and enterprise environments.

SKILLS

Programming Languages: Java, Kotlin, JavaScript, TypeScript, SQL, HTML/CSS
Technologies: Spring Boot, Hibernate, REST, SOAP, OpenAPI, gRPC, Angular, React, Node.js, Webpack, Vite
Cloud & Infrastructure: GCP, Kubernetes, Docker, Terraform, Jenkins, GitHub, n8n
Messaging & Datastores: Apache Kafka, PostgreSQL, OracleDB, MongoDB, Redis
Observability & Monitoring: Prometheus, Grafana, OpenTelemetry, Datadog
Practices: Agile/Scrum, TDD, Code Reviews, Mentoring, AI-assisted development (Copilot, Cursor, Claude, Qwen)

EXPERIENCE

- Product Engineer**
[Allstate Insurance Company](#) - Insurance provider

May 2026 - Present
Remote

 - Led the migration of core Java/Spring Boot services in a Tier-1 real-time insurance rating platform from Spring Boot 3 to Spring Boot 4, resolving dependency and compatibility issues across a data enrichment pipeline.
 - Identified and fixed multiple security vulnerabilities and production defects in a Tier-1 service responsible for real-time premium calculation, owning testing and quality end-to-end under a TDD, full-cycle product-engineering model.
 - Authored comprehensive technical documentation of the rating platform and its data enrichment pipelines, using AI-assisted tooling and an internal knowledge base to accelerate team onboarding.
- Software Engineer**
[Sovcombank Technologies LLC](#) - FinTech solutions provider

May 2024 - Feb 2026
Remote

 - Built an internal AI-powered knowledge base with open-source LLM tooling and n8n workflow automation, cutting new-hire ramp-up to a first major task from roughly two weeks to one.
 - Designed and implemented backend microservices and integration APIs in Java and Spring Boot with OpenAPI-driven contracts, sustaining +3,000 RPS on average across owned API modules at 99.9% uptime.
 - Architected event-driven communication with Apache Kafka, improving throughput and resilience of transaction processing under high load.
 - Improved database performance by eliminating N+1 query patterns, adding targeted indexes, and rewriting slow queries, reducing endpoint latency under load.
 - Monitored production systems in real time using Prometheus, Grafana, and OpenTelemetry, reducing mean time to recovery during incidents.
- Software Engineer**
[Softline](#) - Global IT solutions and services provider

July 2022 - May 2024
On-site

 - Modernized a legacy monolith from Java 1.8 to a current Spring Boot stack, effectively rebuilding it from the ground up.
 - Scaled the document processing platform from 2M to 10M documents by introducing asynchronous task processing, application replicas, and database schema and query optimizations.
 - Built a new user-facing UI from scratch with Angular 16 and TypeScript, delivering client-facing features in close collaboration with product and QA teams.
 - Introduced monitoring and alerting from scratch using Prometheus and Grafana, building dashboards that reduced production downtime by 40%.

EDUCATION

Master of Science, Computer Science – Ufa State Petroleum Technological University	2022–2024
Bachelor of Science, Petroleum Engineering – Ufa State Petroleum Technological University	2018–2022
